## INTERVENTION TOOL

# Problems

### 1. Introduction

In order to develop a set of educational activities aimed to improve problem solving skills, we refer to some theoretical frameworks that will be described in the session 2.

In session 3 the design of the educational activities is described. In particular, if the activities are addressed to a single student or to the class, the educational aim of the activities, the Cognitive area and math domain of interest and the Mathematical objects in the areas of difficulties identified through the B2 questionnaire.

### 2. Theoretical framework of reference

The theoretical references that helped us to design the following activities are:

1) **Universal design for learning (UDL) principles** (Table 3), a framework specifically conceived to design *inclusive* educational activities (<http://udlguidelines.cast.org/>)

Table 3: UDL guidelines

	Provide multiple means of <b>Engagement</b> → Affective Networks The "WHY" of learning	Provide multiple means of <b>Representation</b> → Recognition Networks The "WHAT" of learning	Provide multiple means of <b>Action &amp; Expression</b> → Strategic Networks The "HOW" of learning
Access	Provide options for <b>Recruiting Interest</b> (7) → <ul style="list-style-type: none"> <li>Optimize individual choice and autonomy (7.1) &gt;</li> <li>Optimize relevance, value, and authenticity (7.2) &gt;</li> <li>Minimize threats and distractions (7.3) &gt;</li> </ul>	Provide options for <b>Perception</b> (1) → <ul style="list-style-type: none"> <li>Offer ways of customizing the display of information (1.1) &gt;</li> <li>Offer alternatives for auditory information (1.2) &gt;</li> <li>Offer alternatives for visual information (1.3) &gt;</li> </ul>	Provide options for <b>Physical Action</b> (4) → <ul style="list-style-type: none"> <li>Vary the methods for response and navigation (4.1) &gt;</li> <li>Optimize access to tools and assistive technologies (4.2) &gt;</li> </ul>
Build	Provide options for <b>Sustaining Effort &amp; Persistence</b> (8) → <ul style="list-style-type: none"> <li>Heighten salience of goals and objectives (8.1) &gt;</li> <li>Vary demands and resources to optimize challenge (8.2) &gt;</li> <li>Foster collaboration and community (8.3) &gt;</li> <li>Increase mastery-oriented feedback (8.4) &gt;</li> </ul>	Provide options for <b>Language &amp; Symbols</b> (2) → <ul style="list-style-type: none"> <li>Clarify vocabulary and symbols (2.1) &gt;</li> <li>Clarify syntax and structure (2.2) &gt;</li> <li>Support decoding of text, mathematical notation, and symbols (2.3) &gt;</li> <li>Promote understanding across languages (2.4) &gt;</li> <li>Illustrate through multiple media (2.5) &gt;</li> </ul>	Provide options for <b>Expression &amp; Communication</b> (5) → <ul style="list-style-type: none"> <li>Use multiple media for communication (5.1) &gt;</li> <li>Use multiple tools for construction and composition (5.2) &gt;</li> <li>Build fluencies with graduated levels of support for practice and performance (5.3) &gt;</li> </ul>
Internalize	Provide options for <b>Self Regulation</b> (9) → <ul style="list-style-type: none"> <li>Promote expectations and beliefs that optimize motivation (9.1) &gt;</li> <li>Facilitate personal coping skills and strategies (9.2) &gt;</li> <li>Develop self-assessment and reflection (9.3) &gt;</li> </ul>	Provide options for <b>Comprehension</b> (3) → <ul style="list-style-type: none"> <li>Activate or supply background knowledge (3.1) &gt;</li> <li>Highlight patterns, critical features, big ideas, and relationships (3.2) &gt;</li> <li>Guide information processing and visualization (3.3) &gt;</li> <li>Maximize transfer and generalization (3.4) &gt;</li> </ul>	Provide options for <b>Executive Functions</b> (6) → <ul style="list-style-type: none"> <li>Guide appropriate goal-setting (6.1) &gt;</li> <li>Support planning and strategy development (6.2) &gt;</li> <li>Facilitate managing information and resources (6.3) &gt;</li> <li>Enhance capacity for monitoring progress (6.4) &gt;</li> </ul>
Goal	Expert Learners who are... <b>Purposeful &amp; Motivated</b>	<b>Resourceful &amp; Knowledgeable</b>	<b>Strategic &amp; Goal-Directed</b>

The Center for Applied Special Technology (CAST) has developed a comprehensive framework around the concept of Universal Design for Learning (UDL), with the aim of focusing research, development, and educational practice on understanding diversity and facilitating learning (Edyburn, 2005). UDL includes a set of Principles, articulated in *Guidelines and Checkpoints*<sup>1</sup>. The research grounding UDL's framework is that "learners are highly variable in their response to instruction. [...]"

<sup>1</sup> For a complete list of the principles, guidelines and checkpoints and a more extensive description of CAST's activities, visit <http://www.udlcenter.org>

Thus, UDL focus on these individual differences as an important element to understanding and designing effective instruction for learning.

To this aim, UDL advances three foundational Principles: 1) provide multiple means of representation, 2) provide multiple means of action and expression, 3) provide multiple means of engagement. In particular, guidelines within the first principle have to do with means of perception involved in receiving certain information, and of “comprehension” of the information received. Instead, the guidelines within the second principle take into account the elaboration of information/ideas and their expression. Finally, the guidelines within the third principle deal with the domain of “affect” and “motivation”, also essential in any educational activity.

For our analyses we will focus in particular on specific guidelines within the three Principles<sup>2</sup>.

Guidelines within Principle 1 (provide multiple means of representation), suggest proposing different options for perception and offering support for decoding mathematical notation and symbols. Moreover, guidelines suggest the importance of providing options for comprehension highlighting patterns, critical features, big ideas, and relationships among mathematical notions. Finally, our analyses will give examples of how software AINuSet can guide information processing, visualization, and manipulation, in order to maximize transfer and generalization.

Moreover, the guidelines from Principle 2 (provide multiple means of action and expression) suggest to offer different options for expression and communication supporting planning and strategy development. Finally, the guidelines from Principle 3 show how certain activities can recruit students' interest, optimizing individual choice and autonomy, and minimizing threats and distractions.

In the section 4 we will analyse examples of activities, classifying them both by the type of mathematical learning they are designed and the cognitive area they support. We will show how these examples have been designed on the UDL principles in order to make them inclusive and effective to overcome math difficulties identified through B2 questionnaire.

2) The European Project **FasMed**, that focused on formative assessment in mathematics and science, (<https://research.ncl.ac.uk/fasmed/>).

Formative assessment (FA) is conceived as a method of teaching where “evidence about student achievement is elicited, interpreted, and used by teachers, learners, or their peers, to make decisions about the next steps in instruction that are likely to be better, or better founded, than the decisions they would have taken in the absence of the evidence that was elicited” (Black & William, 2009, p. 7). FaSMEd project refers to William and Thompson (2007)'s study, that identifies five key strategies for FA practices in school setting: (a) *clarifying and sharing learning intentions and criteria for success*; (b) *engineering effective classroom discussions and other learning tasks that elicit evidence of student understanding*; (c) *providing feedback that moves learners forward*; (d) *activating students as instructional resources for one another*;-(e) *activating students as the owners of their own learning*. The teacher, student's peers and the student him- or herself are the agents that activate these FA strategies.

---

<sup>2</sup> The items are taken from the interactive list at <http://www.udlcenter.org/research/researchevidence>

Project number: 2018-1-IT02-KA201-048274

Table 4: Formative assessment strategies

	Where the learner is going	Where the learner is right now	How to get there
Teacher	<b>1</b> Clarifying learning intentions and criteria for success	<b>2</b> Engineering effective classroom discussions and other learning tasks that elicit evidence of student understanding	<b>3</b> Providing feedback that moves learners forward
Peer	Understanding and sharing learning intentions and criteria for success	<b>4</b> Activating students as instructional resources for one another	
Learner	Understanding learning intentions and criteria for success	<b>5</b> Activating students as the owners of their own learning	

FaSMEd activities are organized in sequences, that encompass group work on worksheets and class discussion where selected group works are discussed by the whole class, under the orchestration of the teacher. Taking into account formative assessment strategies and technology functionalities, Cusi, Morselli & Sabena (2017, p. 758) designed three types of worksheets for the classroom activity:

- “(1) *problem worksheets*: worksheets introducing a problem and asking one or more questions involving the interpretation or the construction of the representation (verbal, symbolic, graphic, tabular) of the mathematical relation between two variables (e.g. interpreting a time-distance graph);
- (2) *helping worksheets*, aimed at supporting students who face difficulties with *the problem worksheets* by making specific suggestions (e.g. guiding questions);
- (3) *poll worksheets*: worksheets prompting a poll among proposed options”.

The authors identified feedback strategies (Table 5) the teacher may adopt to give feedback to students (Cusi, Morselli & Sabena, 2018, p. 3466). These strategies are employed in the class discussion that is organized by the teacher after the group work on worksheets.

Table 5:

Revoicing	When the teacher mirrors one student’s intervention so as to draw the attention on it. Often, during the revoicing, the teacher stresses with voice intonation some crucial words of the sentence she is mirroring. Rephrasing takes place when the teacher reformulates the intervention of one student, with the double aim of drawing the attention of the class and making the intervention more intelligible to everybody.
Rephrasing	Rephrasing takes place when the teacher reformulates the intervention of one student, with the double aim of drawing the attention of the class and making the intervention more intelligible to everybody. Rephrasing is applied when the teacher feels that the intervention could be useful but needs to be communicated in a better way so as to become a resource for the others. [...] The revoicing and rephrasing strategies [...] turn one student (the author of the intervention) into a resource for the class.
Rephrasing with scaffolding	When the teacher, besides rephrasing, adds some elements to guide the students’ work.
Relaunching	When the teacher reacts to a student’s intervention, which (s)he considers interesting for the class, not giving a direct feedback, but posing a connected question. In this way, by relaunching the teacher

Project number: 2018-1-IT02-KA201-048274

	provides an implicit feedback [...] on the student's intervention, suggesting that the issue is interesting and worth to be deepened or, conversely, has some problematic points and should be reworked on.
Contrasting	Contrasting takes place when the teacher draws the attention on two or more interventions, representing two different positions, so as to promote a comparison. By contrasting, [...] the authors of the two positions may be resource for the class as well as responsible of their own learning.

We draw from the FaSMEd experience the idea of creating classroom activities in the formative assessment perspective, which may promote inclusion.

### 3. Design

#### 3.1. Difficulties identified through the B2 questionnaire

We detect difficulties in the following item of B2:

1. Solve the following problems:

- a) "Stella has washed 5 pairs of socks. When she went to take them out of the washing machine one sock was missing. How many socks did Stella take out of the washing machine?"
- b) "Peter has 40 cards. If Alex loses 10 cards, he will have as many as cards Peter does. How many cards does Alex have?"
- c) "One family has 3 children. Each child of the family drinks 2 glasses of milk every day. How many glasses of milk will the family drink during 10 days?"
- d) To make 4 handbags crocheted in cotton, 6 cotton balls are needed. How many balls do you need to make 20 handbags?
- e) Sara received 24 euros as a gift, Marta received 6 euros less. How many euros have the two girls in total?

These difficulties are related to the understanding and problem solving.

#### 3.2. Cognitive area and math domain of interest

The area of difficulties identified through the B2 questionnaire is related to the domain of *Arithmetic*. In particular, the difficulties are related to problem solving. Thus, *Reasoning* is the cognitive area involved.

#### 3.3. Educational Aims

The intervention tool is aimed at help students in addressing problem solving, by presenting them strategies for approaching (heuristic methods).

#### 3.4. Addressing to Student /class

The intervention tool is to be addressed to classroom.

#### 3.5. Educational activities: the Intervention Tool

The teacher presents a problem and explains some steps of a practical method to be used to solve problems (COSMOS). Sometimes the use of heuristic methods can help the process of finding a solution for a problem.

*Maria started reading a 120 page book on Monday. If she reads 38 pages on Monday and 25 pages on Tuesday, how many pages are left to finish the book?*

For the given problem, on the board, the teacher shows the application of each step of the method.

Maria started reading a 120 page book on Monday. If she read 38 pages on Monday and 25 pages on Tuesday, how many pages are left to finish the book?

?

120		
38	25	?

$$\begin{array}{r} 38 \\ + 25 \\ \hline 63 \end{array}$$

$$\begin{array}{r} 120 \\ - 63 \\ \hline 57 \end{array}$$

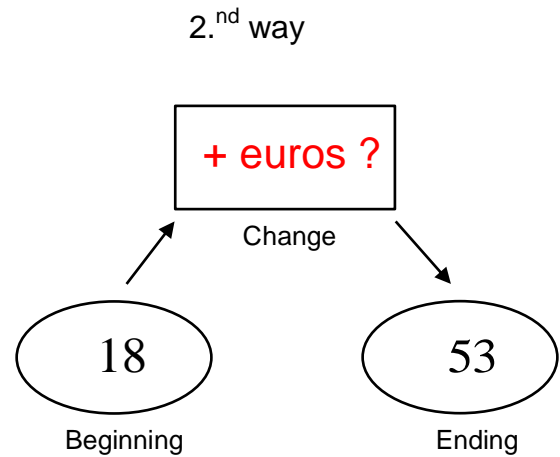

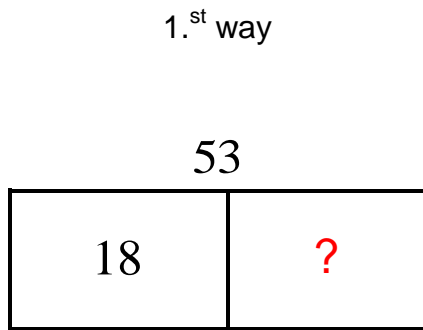

Validation:  $38 + 25 + 57 = 120$

Project number: 2018-1-IT02-KA201-048274

Carol had 18 euros. Then Simon gave her some more euros. Now Carol has 53 euros. How many euros did Simon give her?

$$18 + ? = 53$$

$$53 - 18 = ?$$

Validation:

$$18 + 35 = 53$$

The teacher presents other examples solved using the same strategy.

Maria had some euros. Then Nick gave her 17 euros. Now Maria has 41 euros. How many euros did Maria have to start with?

?

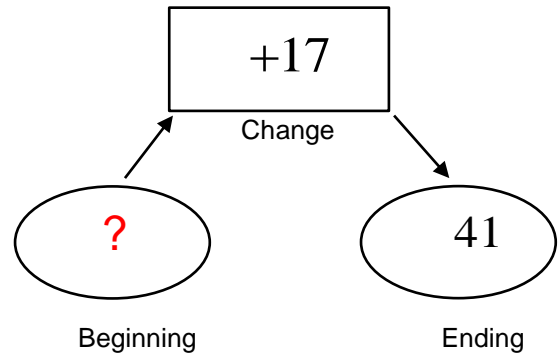

Project number: 2018-1-IT02-KA201-048274

1.<sup>st</sup> way

2.<sup>nd</sup> way

$$\boxed{?} + 17 = 41$$

$$41 - 17 = \boxed{?}$$

Validation:

$$\boxed{24} + 17 = 41$$

George and Chris shared 76 euros. George got three times more than Chris.

How much less money did Chris get?

?

1.<sup>st</sup> way

2.<sup>nd</sup> way

$$76 \div 4 = 19$$

$$2 \times 19 = 38$$

$$19 \times 3 = 57$$

$$19 + 57 = 76$$

Project number: 2018-1-IT02-KA201-048274

3 balloons cost 9 euros. How much will cost 11 balloons?

$$11 \times 3 = 33$$

Finally, the teacher gives students a set of problems to individually apply the process.
